# PySpark Outputs

## 1) Show all customers

customers.show()

output:

```
+-----------+-------------+---------+---+
|customer_id|customer_name|     city|age|
+-----------+-------------+---------+---+
|          1|         Ravi|Hyderabad| 25|
|          2|         Sita|  Chennai| 32|
|          3|         Arun|Hyderabad| 28|
|          4|        Meena|Bengaluru| 35|
|          5|        Kiran|  Chennai| 22|
+-----------+-------------+---------+---+
```

## 2) Show customers from Chennai

customers.filter(customers.city == "Chennai").show()

output:

```
+-----------+-------------+-------+---+
|customer_id|customer_name|   city|age|
+-----------+-------------+-------+---+
|          2|         Sita|Chennai| 32|
|          5|        Kiran|Chennai| 22|
+-----------+-------------+-------+---+
```

### 3) Show customers with age > 25

customers.filter(customers.age > 25).show()

output:

```
+-----------+-------------+---------+---+
|customer_id|customer_name|     city|age|
+-----------+-------------+---------+---+
|          2|         Sita|  Chennai| 32|
|          3|         Arun|Hyderabad| 28|
|          4|        Meena|Bengaluru| 35|
+-----------+-------------+---------+---+
```

### 4) Show only customer_name and city

customers.select("customer_name", "city").show()

output:

```
+-------------+---------+
|customer_name|     city|
+-------------+---------+
|         Ravi|Hyderabad|
|         Sita|  Chennai|
|         Arun|Hyderabad|
|        Meena|Bengaluru|
|        Kiran|  Chennai|
+-------------+---------+
```

### 5) Count customers city-wise

customers.groupBy("city").agg(count("*").alias("total_customers")).show()

output:

```
+---------+---------------+
|     city|total_customers|
+---------+---------------+
|  Chennai|              2|
|Hyderabad|              2|
|Bengaluru|              1|
+---------+---------------+
```
